

RioJuvenation System by RioBlush a revolutionary advance in dermatology

Our skin changes over time, losing its youthful look and giving way to wrinkles, laxity, cellulite and stretch marks. RioBlush's CO₂ RioJuvenation system is a safe, minimally invasive, clinically proven method to rejuvenate, restore and recondition the skin. Results can be rapid and dramatic. The treatment has no downtime and a single session can take between fifteen minutes and an hour. A simple and safe procedure for beautiful, younger looking skin.

How it works

As we age, subcutaneous capillaries become dormant, decreasing circulation and depriving cells of oxygen; this, combined with environmental stresses and other variables, inhibits the ability of cells to regenerate and function properly. RioBlush's RioJuvenation System infuses CO₂ just beneath the skin's surface; the body interprets this as an oxygen deficit and responds by increasing the flow of blood. This provides a surge of oxygen and nutrients to the treated area and improves circulation, resulting in cell restoration.

Is RioJuvenation right for you?

- RioJuvenation dramatically:
- fades stretch marks
- diminishes cellulite
- tightens loose skin
- brightens and firms the eye contour

How many sessions before I see an improvement?

Most people observe improvement after the first treatment, though it usually takes up to one month for the body to properly react to the process. More pronounced and long-lasting results are observed after 4 to 12 treatments, by which time the skin shows clear signs of healthy rejuvenation.

Is the treatment painful?

The treatment is completely natural. Some people may experience some mild discomfort but most find it less uncomfortable than electrolysis, laser, or waxing.

Is there any downtime?

RioJuvenation is minimally invasive. There is no downtime.

How long do the benefits last?

RioBlush is a retro-aging treatment, but it does not arrest the aging process; new cells will age naturally over time. At least one-yearly cycle is recommended.

Is carbon dioxide toxic?

No, carbon dioxide is a natural byproduct of the body and not toxic.

Circulation and collagen production are stimulated

"The biggest breakthrough in beauty therapy since Botox"
Daily Mail, UK

"The results are really amazing, the length of the stretchmark is considerably reduced and the white color has disappeared."
Votre Beauté Magazine, France

"I am proud to have conducted the first clinical studies using CO₂ gas injections to treat stretch marks. Our center has found this therapy to be the best option currently available to treat this condition."
Professor Carlos Antonio Abramo M.D., Ph.D, São Paulo, Brazil.

"Everyone is asking what I've done to make my skin look so good."
Kyra Panchenko, Make up artist, Sex & the City.

"I tell all my models to try a little RioJuveneration."
Rie Omoto, Make up Artist, Editorial Contributor, In Style Magazine, Vogue.

"The skin around my eyes looks firmer and brighter."
Leora Barish, Screenwriter, Desperately Seeking Susan.
